

IN THE SPECIFICATION

Please replace the paragraph beginning at line 5, page 11 and ending at line 19, page 12 with the following rewritten paragraph:

A determination may then be made as to whether to view the changes made to the original document by a particular user, including the user identified in step 303, in step 307. If the user identified in step 303 wants to view changes made to the original document by a particular user, including the user identified in step 303, then the user selects the on-screen symbol associated with that particular user in step 308. For example, referring to Figure 4, if the user identified in step 303 wants to view changes made to the original document by Smith then the user selects the on-screen symbol, e.g., icon, entitled "Smith." In one embodiment, when the on-screen symbol is selected a pop-up menu may be displayed on display 238 in step 309. The pop-up menu may display one or more versions of the original document written by the user associated with the on-screen symbol selected in step 308. In step 310, the user may select a particular version of the original document where the version comprises information regarding the changes made with respect to the original document. Upon selection of a particular version, the user, in step 311, may view on display 238 at least a section of the original document with highlighted changes that indicate the changes made by the particular user associated with the on-screen symbol, e.g., icon, as illustrated in Figure 5. Figure 5 illustrates the changes made by a particular user with respect to an original document in accordance with the present invention. As further illustrated in Figure 5, the on-screen symbol, e.g., icon, associated with the particular user whose changes are highlighted on display 238 may change form[[],]. This is illustrated in Figure 5 by the dotted shading and the corresponding bold face font. It is noted that the changes made to the original document may be illustrated in other forms not exemplified in Figure 5 and that Figure 5 is illustrative. It is further noted that in one embodiment, the section of the original document with highlighted changes displayed on display 238 may be the section indicating the first of the changes of the original document. The user as identified in step 303 may be provided

with an option to proceed to the next one or more changes in the original document. For example, a button may appear on display 238 providing the user as identified in step 303 with an option to proceed to the next one or more changes in the original document. It is further noted that in one embodiment, the original document may be displayed while overlying the original document with changes made with respect to the original document as stored in a file associated with the selected version. Each version may have a file associated with it storing the words changed with respect to the original document including instructions as to where the words are to be placed in the original document. In one embodiment, the file associated with the selected version may be appended to the file storing the original document. In one embodiment, at least one section of the original document may be displayed on display 238 in parallel with the corresponding section in the version selected where the original document includes highlighted changes. In another embodiment, at least one section of the original document may be displayed with word(s) highlighted where the word(s) highlighted indicate the words in the original document that were changed in the selected version. The user may then select the highlighted word(s) to view the changes made to the highlighted word(s) in the selected version.
